

Programming Part

For the following exercises, you have to use your SCHEMA **db_ws_24!**

1. CREATE a table person with the following attributes and settings:

Field	Type	Null	Key	Default	Extra
id	int	NO	PRI	NULL	auto_increment
gender	int	NO		NULL	
nnam	varchar(60)	NO		NULL	
fnam	varchar(60)	NO		NULL	
bdate	timestamp	NO		2014-01-01 06:30:00	
zip_id	int	YES		NULL	
str	varchar(60)	NO		NULL	
tel	varchar(40)	NO		NULL	
mobil	varchar(40)	NO		NULL	

CREATE the table with all his attributes and then set the id as PRIMARY KEY.

2. Add now a constraint with the name `fk_person2zip` and set the `zip_id` as a FOREIGN KEY from the table person which REFERENCES to the `id` from zip. Please use RESTRICT for UPDATE & DELETE!
3. Add at least 10 datasets in your table person by using the INSERT INTO command.
